                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymuclectide kinase. Adaptor oligonuclectides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gelectrophoresis. Vector DNA was prepared from a derivative of pMAP12014|gb|AP129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to

/done lib="Caberner Sauvignon Berry Post-Veraison - CAB7"
/note="Corgan: Berry; Vector: pDNR; Site 1: Sfil; Site 2:
Sfil; CAB7 is a cDNA library of Caberner Sauvignon Clone 8
berries. Samples were collected post-veraison from
field-grown vines during stage III of berry growth at 89
days after full bloom. Berries soluble solid concentration
ranged between 18-19 brix. Sampled vines were located at
the University of California, Davis, Experimental
Vineyard. cDNss were made by oligo-dr priming and directi
onally cloned. 5'and 3' adaptors were used in cloning as
follows: S'-ARGCGGGCGGARGAGTGGCCATTACGGCGGG-3' and
5'-ATTTACAGGCCGGCAATGAT(3H) NO.3'. Library was
constructed using the Clontech Creator SWART kit and
size-selected to contain the 0.5-3 kb size fraction."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;

encoding it is New mammalian histamine H4 receptor proteins and polynucleotides the proteins, useful in gene therapy for treating diseases where beneficial to elevate mammalian histamine H4 receptor activity.

Claim 13; Fig 5B; 92pp; English.

The present sequence is that of a mouse histamine receptor of the H4 subtype, as predicted from a cDNA clone isolated from a spleen cDNA library. The invention provides mammalian (human, mouse, rat and guinea pig) histamine H4 receptor nucleic acid molecules (see AAN10980-83) and polypeptides (see AAN50564-67). The nucleic acids have been expressed in recombinant host cells that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor may be used in gene therapy for the trearment of diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant protein is useful for identifying modulators of the histamine H4 receptor. Such modulators may be useful

The present sequence is that of a rat histamine receptor of the H4 subtype, as predicted from a cDNA clone isolated from a spleen cDNA clubtype, as predicted from a cDNA clone isolated from a spleen cDNA clubtype, as predicted from a cDNA clone isolated from a spleen cDNA clibrary. The invention provides mammalian (human, mouse, rat and guinea pig) histamine H4 receptor nucleic acid molecules (see AAA10980-83) and polypeptides (see AAM50564-67). The nucleic acids have been expressed in recombinant host cells that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant protein is useful for identifying modulators of the histamine H4 receptor. Such modulators may be useful for diagnosing, treating or preventing asthma, allergy, inflammation, cardiabetes mellitus, hyperglycemia, constipation, arrhythmia, disorders of the neuroendocrine system, stress and spasticity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PGLKESAASRHSESPRRKSSILVSLRTHMNSSITAFKVGSFWRSESAALROREYAELLRG 300

                                                                                                                                                                                                                                      g
                                                                                                                                                                                                                                                                                                                          The present invention describes transmembrane receptors, preferably human grottein coupled receptors (GPCR), for which the endogenous ligand is unknown (orphan GPCR receptors). More specifically the present invention relates to non-endogenous, constitutively activated versions of a human GPCR. These non-endogenous human GPCRs can be useful for the direct adontication of candidate compounds as receptors agonists, inverse agonists or partial agonists for use as pharmaceutical agents. AAA46017 to AAA46126 and AAB02825 to AAB02859 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DFLVGLISIPLYIPHVLFNWNFGSGICMFWLITDYLLCTASVYNIVLISYDRYQSVSNAV 120

The present amino acid sequence is the hRUP7, an endogenous human orphan G protein-coupled receptor (GPCR). The full length hRUP7 cDNA was cloned by TF-PCR using human peripheral leucocyte cDNA as template. The orphan GPCR of the invention, like all GPCRs has seven transmembrane alpha helices with an extracellular N-terminus and an intracellular C-terminus. The mendogenous ligands has yet been identified for the proteins of the invention. The orphan GPCRs may be used in the identification of their endogenous ligands, and to screen potential GPCR agonists and their endogenous ligands, and to screen potential GPCR agonists and their precise role in normal and diseased human conditions. Nucleic acid encoding human orphan GPCRs may be used for tissue localisation expression analysis to provide information about their function in the latty and pathological states
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               G-protein coupled receptor; GPCR; PFI-013; antiallergic; antiasthmatic; antiinflammatory; vasotropic; antidiabetic; anorectic; cytostatic; human; osteopathic; neuroprotective; nootropic; dermatological; gynecological;

This is a human G-protein coupled receptor (GPCR)-like polypeptide, PFI-013, encoded by CDNA of NCIMB 41073. The PFI-013 protein can be expressed by standard recombinant methodology. Antibodies and modulators of FFI-013 are useful in the manufacture of a medicament for treating allergic disorder, including extrinsic asthma, immunological disorders, such as intrinsic asthma, vasculitic granulomatous disease, interstital and other pulmonary disease, including chronic obstructive pulmonary disease. (COPD), infectious, inflammatory disease, such as inflammatory bowel disease and neoplastic and wyeloproliferative diseases. They are also useful for treating observatives, metabolic, neurological diseases, psychotherapeutics, urogenital disease, reproduction and sexual medicine, psychotherapeutics, urogenital disease, reproduction and sexual medicine, inflammation, cancer, tissue repair, dermatology, photoageing, skin pigmentation, osteoporosis, cardiovascular, gastrointestinal diseases, allergy and respiratory disease, sensory organ disorders, sleep disorders and hair loss. The PFI-013 protein and nucleic acid are useful in the diagnosis and treatment of the above conditions and also for screening drug candidates for the treatment of diseases associated with signal transduction. The antibodies are also useful for enrichment of the account of the contribution and for diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is that of the human G protein-coupled receptor protein BG26, which shows significant homology with histamine H3, with activity of binding to histamine and capable of changing intracellular CAMP concentration in response to its stimulus. The protein is applicable as a tool in screening ligands or drug candidates for regulating signal transduction from such protein and treating diseases associated with its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to the human G protein-coupled receptor AXOR35 (AAB73621), to cDNA encoding AXOR35 (AAB24006), and to AXOR35 fragments and variants. Like all G protein-coupled receptors, AXOR35 has 7 putative transmembrane domains and is involved in signal transduction. AXOR35 has homology and structural similarity with G protein-coupled receptors such as the human histamine H3 receptor. The invention also relates to expression vectors and host cells comprising AXOR35 DNA, to recombinant expression of AXOR35, and to an AXOR35-specific antibody. AXOR35 proteins and nucleotides may be used to treat a wide variety of disorders including bacterial, fungal, protozoal and viral infections, particularly

encodes the novel G polynucleotide, useful for identifying modulator compounds which are used for treating psoriasis, schizophrenia, diabetes, encoprotein-coupled receptor (nGPCR) polypeptide (nGPCR-2067).

Claim 31; Page 63; 100pp; English.

This sequence represents a novel human G protein-coupled receptor (GPCR) C designated nGPCR-2067. Like all GPCRS, nGPCR-2067 has 7 putative cransmembrane domains and is involved in signal transduction. The invention also relates to expression vectors and host cells comprising nucleic acids encoding nGPCR-2067, to recombinant expression of nGPCR-2067, to antibodies specific for nGPCR-2067, to drug screening methods c that use nGPCR-2067 and to modulators of nGPCR-2067 activity. nGPCR-2067 invention also discloses the use of nGPCR-2067 activity. nGPCR-2067 and species homologues and may also be used in genetic mapping. The cinvention also discloses the use of nGPCR-2067 nucleic acids in screening c invention also discloses the use of nGPCR-2067 nucleic acids in screening c invention as of species of mappers of these disorders. nGPCR-2067 nucleic acids in screening c acids may additionally be used to generate transgenic acids in cluding c acids may and may provide an insight into treating a variety of human disorders, and may also be used in the design of antisense c molecules for suppressing expression of nGPCR-2067, notelled in conditions, particularly mental disorders, central nervous system conditions, particularly mental disorders, central nervous system

                                                                                                                                                                                                                                                            This sequence represents the amino acid sequence of a human histamine receptor (HR) designated SP9144. The sequence was isolated by searching databases with the sequence of known G-coupled protein receptor (GCPR). The gene is used for recombinant production of HR and for preparing antibodies (Ab). These Ab are used to purify HR by immunoaffinity chromatography, in immunoassay of histamine receptor, to identify cDNA clones that express the receptor, as antagonist to block binding of histamine (for treating any histamine-associated disorder) and to generate anti-idiotypic antibodies. Agonists and antagonists of the HR protein can be used in the treatment of e.g. inflammation, asthma, allergy, atopic dermatitis, stroke, myocardial infarction, migraine, chronic obstructive pulmonary disease, rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease and psoriasis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SYRTQHTGVLKIVTLMVAVWVLAFLVNGPMILVSESWKDEGS--ECEPGFFSEWYLLAIT

```
The present sequence represents a histamine receptor. The polypeptide is useful as an antipoen to elicit the production of antibodies. It is useful as an antipoen to elicit the production of antibodies. The histamine receptor polypeptide and polymuclectide are useful in the treatment and management of diseases such as inflammation, asthma, allergy, atopic dermatitis, stroke, myocardial infection, migraine, chronic obstructive pulmonary disease (COPD), rheumation arthritis, multiple sclerosis, inflammatory bowel disease and psoriasis. They are also useful for modulating intracellular second messenger pathway activated through histamine receptors (cyclic-AMP), calcium, inositol phosphate and mitogen activated protein (MAP) kinaes), tanges in cellular growth rate, secretion of hormones, receptor-stimulated Ca2+mobilization, mitogenic effects, etc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel mammalian histamine receptor polypeptide useful for identifying agonist or antagonist for treating diseases such as inflammation, asthma, stroke, migraine, rheumatoid arthritis, multiple sclerosis, psoriasis.

The present sequence is that of a human histamine receptor of the H4 subtype, as predicted from a cDNA clone isolated from a bone marrow cDNA subtype, as predicted from a cDNA clone isolated from a bone marrow cDNA subtype, as predicted from a cDNA clone isolated from a bone marrow cDNA clone interact.

Ilbrary. The invention provides mammalian human, mouse, rat and guinea polypeptides (see AAMSOS64-67). The mucleic acids have been expressed in peramacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4 ceceptor activity. Recombinant protein is useful for identifying modulators of the human histamine H4 receptor. Such modulators may be useful for diagnosing treating or preventing atchma, allergy, inflammation, cardiovascular and cerebrovascular disorders, non-insulin dependent diabetes mellitus, hyperglycemia, constipation, arrhythmia, disorders of the neuroendocrine system, stress and spasticity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2;

The invention provides an isolated histamine receptor, H4, which binds ligands comprising imidazole attached to amine by an alkyl chain. The H4 receptor can be expressed by standard recombinant methodology. Cells expressing H4 receptor protein at a detectable level can suppress cyclic expressing H4 receptor protein at a detectable level can suppress cyclic adenosine monophosphate (cAMP) formation when contacted with the H4 receptor and antibodies are used for identifying treeptor amodulators. Modulation of histamine H4 receptors is useful to treating transplanted organ rejection, asthma, allergies and cutoimmune pathologies such as multiple sclerosis, type I diabetes, the unmatoid arthritis, cognitive and memory defects. The h4 receptor protein and nucleic acids are useful targets to identify drugs that are protein and nucleic acids are useful targets to identify drugs that are cfetetive in treating disorders associated with histamine-regulated processes. Identification and isolation of H4 receptor provides for development of screening of molecules that interact with H4 receptors. CC development of screening of molecules that interact with H4 receptors. CC development of screening of molecules that interact with H4 receptors. CC development of screening of molecules that interact with H4 receptors. CC development a disorder associated with the function of H4 in peripheral blood received with receptor proviews. The present sequence represents the human histamine H4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

The present invention relates to a new G-protein coupled receptor (GPCR) colypeptide comprising greater than 70% amino acid sequence identity to polypeptide comprising greater than 70% amino acid sequence of human GPCRs TGR21, TGR219.1, TGR130.1, TGR130.2, human TGR213 or TGR22, 80% amino acid sequence identity to mouse TGR18 or 50% amino acid sequence identity to human novel edg receptor protein, as cefined in the specification. The GPCR covalently linked to a solid phase is useful for identified compounds are useful for treating kidney disease, cerebral cavernous malformations, hyperlipidemia, obesity, dyslexia and cardac myxoma. The molecules of the invention are useful for diagnosing disorders or conditions such as kidney-related conditions or diseases curinary abnormalities, renal tubule defects, hypertension and curinary abnormalities, renal tubule defects, hypertension and complicated disorders and others. Modulation of the polypeptide of infiltrations, lesions, functional disorders and jaundice and spleencassociated disorders and others. Modulation of the polypeptide of disorders in the present amino acid sequence represents the human GPCR Credits protein coupled receptors of the invention. This sequence is one of seven novel G protein coupled receptors of the invention (AAU74904-AAU74911)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DFLVGLISIPLYIPHVLFNWNFGSGICMFWLITDYLLCTASVYNIVLISYDRYQSVSNAV 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SYRAQHIGIMKIVAQMYAVWILAFLVNGPMILASDSWKNSTNTKDCEPGFVTEWYILTIT

```
Tymphocytes, macrophages, eosinophils or neutrophils in diseased tissue, by administering to the patient AXOR35 agonists or antagonists. The agonist to entagonist identified is useful for treating a disease such as about or inhibiting or promoting the function of lymphocytes. The asthmat, or for inhibiting or promoting the function of lymphocytes. Cathmat, or for inhibiting or promoting the function of lymphocytes.

Cathmatic lung. AXOR35 or polymucleotide is useful in diagnostic assays, or identifying compounds that are agonists or antagonists of AXOR35, as vaccines, or for treating infections (bacterial, fungal, protozoan or viral infections), transplant rejection, gastrointestinal disorders (such as gastric ulacy, inflammatory bowel diseases (such as remains), unclogical diseases (such as urinary retention), allergy, autoimmune disorders (such as rheumatoid arthritis, cardiovascular diseases (such as urinary retention), hypotension, pulmonary disorders (such as chronic obstructive pulmonary carteriosclerosis, atherosclerosis, gusch as renal ischaemia), arteriosclerosis, anorexia, anxiety, schizophrenial, dyskinesias (such as marcatismors) and seases (such as renal ischaemia), and seases (such as marcatismors) and seases (such as renal ischaemia), earteriosclerosis, anorexia, anxiety, stroke, septic shock, graft warmary and osteoporosis. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   61 DFLVGLISIPLYIPHVLFNWNFGSGICMFWLITDYLLCTASVYNIVLISYDRYQSVSNAV 120

The invention relates to a human G protein-coupled receptor (GPCR)

appearing as ABU92259-ABU92277 (encoded by CDNAs ACA93256-ACA93274) named

hARE-3. hARE-4. hARE-5. hRUP3. hRUP5, hRUP7, hRUP7, hGPCR27, hARE-1. hARE-

-2, hPPR1, hG2A, hCHN4, hCHN4, hCHN6, hCHN9, hCHN10 and hRUF4.

Also included are a plasmid comprising a vector and one of the CDNAs above and a host call comprising the plasmid. The GPCRs are useful for the direct identification of candidate compounds as inverse agonists, gonists or partial agonists. In vitro and in vivo systems incorporating care as understanding the role of constitutive activation as it applies to as understanding the signalling cascade. The CDNAs are useful for making a complex of constitutive activation as it applies to understanding the signalling cascade. The CDNAs are useful for making a probe for doc-blot analysis against tissue mRNA and/or RT-PCR identification of the expression of the invention it issue samples. The
